## About the Voter File

The Secretary of State is responsible for establishing a single official, centralized, and interactive electronic statewide voter registration system. County election administrators maintain the data in the statewide voter registration system.

The Secretary of State provides extracts of public information from the statewide voter registration system. Customers may purchase an annual subscription and get unlimited downloads of data, or may order one-time downloads. Because the statewide system is a live system, data changes from hour to hour, day to day, etc. as county election officials are entering and updating information. Similarly, numbers may change based on voter moves, cancellations and other updates. Each extract is static information that is current as of the time the extract is pulled.

Files purchased through this application are in ASCII delimited text format. **Some fields in the file may be empty depending on which county the data came from. Please review the information below to determine which extract you would like to order, and to understand the data that will be provided for each extract.**
